Vector Arithmetic(CBSE)

Question(1.9.22)Find the value of y for which the distance between the points **P** $(2,-3)$ and **Q** $(10,y)$ is 10 units.

We have the points

It has been given that the distance between the points is 10 units, so

Parameter	Description
P	$\begin{pmatrix}2\\-3\end{pmatrix}$
Q	$\begin{pmatrix}10\\y\end{pmatrix}$
D	$Q-P$

TABLE 0: Variables Used

Solution:

$$\|\mathbf{D}\|^2 = 100 \tag{0.1}$$

$$\|\mathbf{D}\|^2 = \mathbf{D}\mathbf{D}^T \tag{0.2}$$

$$\|\mathbf{D}\|^2 = \begin{pmatrix}8 & y+3\end{pmatrix}\begin{pmatrix}8\\y+3\end{pmatrix} \tag{0.3}$$

$$100 = 73 + y^2 + 6y \tag{0.4}$$

$$\therefore y = 3, -9 \tag{0.5}$$

$$\tag{0.6}$$
